

Lecture 17 Problems

Problem 1

(a): $37^{\circ}\text{C} \rightarrow 310.15 \text{ K} \approx 310 \text{ K}$

$$\Delta G_{(1)}^{\circ} = -7.03 \text{ kcal/mol} - 310 \cdot -1.58 \text{ cal/mol}$$

I would choose (2) since it has a more spontaneous reaction.

(b): (2) is always spontaneous, (1) is spontaneous up to

$$0 = -7030 \frac{\text{cal}}{\text{mol}} - T \cdot -1.58 \text{ cal/molK}$$

$$T = \frac{7030}{1.58} \text{ K} \approx 4450 \text{ K}$$

Problem 2

(i): (a): Stable

(b): Stable

(c): Unstable

(i): (b): Less

(c): Less

(c): more

Problem 3

(a):

(i): No

(ii): Yes

(b):

(i): Yes

(ii): Yes

(c):

(i): No

(ii): Yes

(d):

(i): Yes

(ii): Yes
